Stadium

EXPERIENCE THE GREEN OF

GTF KENTUCKY BLUEGRASS BLEND SEED

4 WAY BLEND

**AVAILABLE BY THE BUCKET
AT GRAFF'S TURF FARMS**

GTF Kentucky Bluegrass Seed Blend is an aggressive, high wear tolerant turf. It possesses a dark green color with dwarf-type growing habits that offer reduced vertical growth. It offers excellent winter hardiness and summer performance.

Graff's Turf Farms' seed blend consists of 4 different cultivars of Kentucky Bluegrass out of over 400 varieties to choose from. When selecting our blend, the top factors we look for are durability, wear tolerance, disease resistance, and color.

The seed blend that we use is the same grass that we have previously used in professional sports fields such as Invesco Field, Coors Field and Folsom Field, as well as many area golf courses. It is a very high quality turf blend that works wonderfully for residential homes as well.

The seed is packaged in 4 lb. buckets and will cover up to 1,000 sq. ft. depending on the desired seeding rate. A typical application for initial seeding is 3-4 lbs. per 1000 sq. ft.

Our seed is tested to be 99.06% pure and free of weeds with minimal other inert ingredients (0.94%). Germination rate is 85%.
