REVEILLE® (rev-uh-lee)

*Barefoot soft and appealing green color...
Looks like Kentucky but acts like Texas...*

Thrives under heat stress and hot sun...

Tolerates cold weather...

Uses less water...

Resists insects and disease...

It's not a miracle, it's Reveille® and Graff's Turf Farms has it!

Reveille® is a multi-use cool season grass for semi-arid regions. It adapts well to golf courses, home lawns, commercial and industrial parks. Reveille® is dark green with medium-texture, heat and full sun tolerance, cold hardiness, and insect and disease resistance.

It needs less water, an important factor in cities when water restrictions are imposed. Low water use lawns become more important when drought occurs. Reveille® is an F1 hybrid between Texas bluegrass, *Poa arachnifera*, and Kentucky bluegrass, *Poa pratensis*. Dr. James Read developed the successful cross in 1990 after 12 years of research.

SPECIAL PROPERTIES	REVEILLE...
<ul style="list-style-type: none"> • Medium-texture • Appealing green color • Resistant to powdery mildew • Resistant to fall armyworm • Moderate resistance to rust and white grub 	<ul style="list-style-type: none"> • A brand new hybrid, turfgrass, crosses native Texas bluegrass and Kentucky bluegrass. • Cool season benefits never before available. • Thrives where Kentucky bluegrass can't survive the heat and sun.

Comments:

"Village Homes has utilized a new hybrid turf grass, called Reveille turf, at two of their show homes. The turf, supplied by Graff's Turf Farms, requires 40 percent less water and crosses native Texas Bluegrass and Kentucky Bluegrass.

"We wanted to landscape the homes, but wanted to use xeriscaping throughout the properties, Reveille turf was installed and you would not believe how thick and green it is," said Community Manager Kermit Marquand."

East Cherry Creek Valley Water & Sanitation District Newsletter - Summer 2003

TOPIC	RECOMMENDATIONS
Plant	<ul style="list-style-type: none"> • Easily established with sod all year, except the coldest parts of December and January.
Water	<ul style="list-style-type: none"> • Needs one long drink, not many short ones. (1/3 pan evaporation) • Hates wet feet. Don't water frequently. For healthy roots, this blue grass needs a dry down period between watering.
Fertilize	<ul style="list-style-type: none"> • Requires four to six pounds of nitrogen per 1,000 square feet annually, depending on soil.
Management	<ul style="list-style-type: none"> • Use a rotary or reel mower. • Cut to a height of 2-3 inches.
Considerations	<ul style="list-style-type: none"> • Avoid extreme saline conditions, as with any cool season turfgrass (salt grass excluded).
